Labels for liquid packaging

LiquiDose® Labeling – available in Rectangular, Square, Mini, Butterfly and Flag & Receipt styles

All LiquiDose Labels are available for use with laser, ink jet and direct thermal printers and can be easily imprinted with our MILT® software. Bar Codes, Graphics, Special Fonts, Tall Man Lettering... even Logos, Symbols and Pictures...can all be included on your labels. LiquiDose labels are designed to adhere to all dispensing containers, even those with tight circumferences. Whether you're packaging large or small doses, liquid unit dose, syringes, ampules, IV meds or odd shaped containers, we have the labels for your job.

LiquiDose Butterfly Labels have a 2-wing design so they can be wrapped around syringes, ampules or oddly shaped containers. Each wing has a labeling area to accommodate multiple lines and a bar code. Laser Butterfly Labels have been produced in a durable, heavy stock to withstand rugged treatment in bins or drawers and are available in 6 colors (White, Blue, Green, Orange, Red and Yellow).

Butterfly labels. Six colors available.

Flag and Receipt Labels offer space for identifying medication containers. Flag folds to create a double sided label. Also print data on flag tail to wrap around syringe or ampule. Apply receipt to charts, records or packaging for tracking and accountability… or use as a secondary label for duplicate data or additional bar codes.

MILT software includes a built-in library of auxiliary and warning images that can be placed on any label.

Mini LiquiDose Label. 7/16" x 1-1/4" size was designed for labeling syringes, ampules, small packages and "re-barcoding" applications. It can easily accommodate 5 lines of text and a bar code. The label's size makes it ideal for you to create your own Auxiliary Warning Labels.

LiquiDose Label. 1" x 3" size lends itself to a variety of uses...medication bottles, bin identification, log report books...Use with laser, ink jet and direct thermal printers.

Line Tracing Labels facilitate IV line identification for any IV medication. Place large piggy back label on IV infusion container and smaller labels on each end of the tubing. Improves accuracy and minimizes line confusion. Many pre-printed styles available or customize your own using our MILT software.
